

COMPANY OVERVIEW

GRISWOLD WATER SYSTEMS

BECAUSE THE WORLD DEPENDS ON WATER

Griswold Water Systems began nearly 40 years ago by developing centrifugal separator systems and a range of filtration products for HVAC and industrial cooling systems. After acquiring a Florida-based applied electronics company, Griswold Water Systems leveraged more than 15 years of additional experience pioneering electronic water treatment systems to control scale and bacteria. In 2004, substantial investment was committed to research the underlying principles of physical water treatment, something few competitors have done. This continued commitment makes Griswold Water Systems the technological leader in its field, illustrated by its staffed water testing laboratory and specialized research instruments.

The powerful, full-scale industrial water treatment system, the patent pending Edge, grew out of this effort. Rigorous testing of the effects of its high intensity, fully adjustable electronic signals have opened new applications for this technology. Through precise signal calibration, the technology enhances particle flocculation and coagulation to allow for significant operational improvements in a multitude of waste water applications. Field testing in real-world scenarios has proven Griswold technology will drastically reduce associated wastewater costs and provide a rapid return on investment.

Griswold Water Systems' products have been purchased by some of the world's leading international companies in a wide range of applications. Griswold Water Systems works closely with customers to monitor, test, and evaluate water system performance both before and after installation. This attention to detail ensures a trouble free transition to improved waste water treatment and provides the customer with the maximum possible savings in chemicals, sludge hauling, and environmental compliance.

With offices in Florida and California, its products are manufactured domestically. Together with its sister companies Cla-Val and Griswold Controls, Griswold Water Systems capitalizes on over eleven decades of combined experience in fluid dynamics, manufacturing, engineering systems, and product development. By providing repeatable, measurable results, Griswold Water Systems' technology is good for the environment and the bottom line. Griswold Water Systems – because the world depends on water.
